DETAILED ACTION

Response to Arguments

Applicant's arguments filed January 27, 2005 have been fully considered but they are not persuasive.

Applicant's arguments regarding the joint axis that coincides with the natural axis of rotation of the patient's natural leg have been read, however, they are not persuasive. The Examiner has only given patentable weight to the mount but has not given patentable weight to the functional language of the joint axis.

Expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining patentability of the apparatus claim. *Ex parte Thibault*, 164 USPQ 666, 667 (Bd. App. 1969).

In order to be given patentable weight, a functional recitation must be supported by recitation in the claim of sufficient structure to warrant the presence of the functional language. *In re Fuller*, 1929 C.D. 172; 388 O.G. 279.

Additionally, in order to give patentable weight the Applicant's representative has to add structure limitations to the claims in order to overcome the previous rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-13 and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kristinsson US Patent 4,634,446.

Kristinsson discloses a prosthetic hip comprising a socket (1), a mount (7), a joint axis (14), a first member (8), an upper leg end (9), a load arm (18 & 17), an extension stop member having two engaging means to prevent rotation of the first member to the socket (see col. 4, lines 28-30).

Claims 1 and 11 are rejected under 35 U.S.C. 102 (b) as being anticipated by Thompson US Patent 3,953,900.

Thompson discloses a prosthetic hip comprising a socket (1), a mount (3), a joint axis (4), a first member (6), an upper leg end, and an extension stop member see spring over element 4).

Allowable Subject Matter

Claims 4, 5, 14 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 3738

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
